

How do I set up the environment using the Pygame framework to render the game grid?

STEP 1:

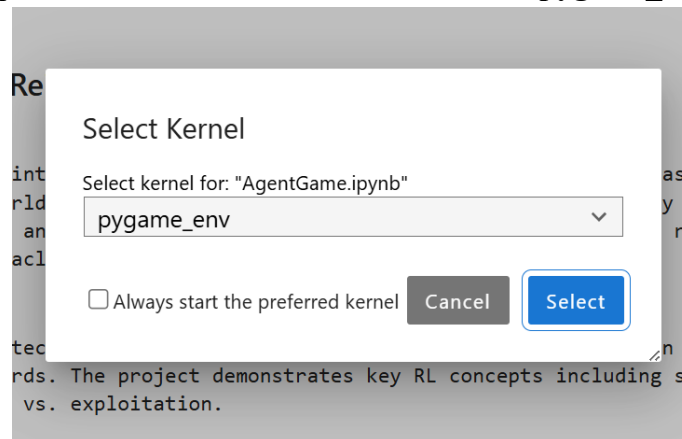

Install pygame library

- Open the command prompt
- Type this command “pip install pygame”
- The pygame library starts installing

STEP 2:

Setting up the kernel in the Jupyter notebook

- Need to install the Pygame library.
- Need to set the Kernel in the Jupyter Notebook.
 - Setting Kernel in Jupyter Notebook.
 - Go to Kernel menu in the top menu and open it.
 - Select the change Kernel.
 - It opens a window like below and select the “**pygame_env**”.

Then we are ready to use the pygame library in Jupyter notebook.

NOTE:

When running the Jupyter notebook which is using the pygame library. The Game window will be opening as a separate window which will be rendering the game.

Sometimes it takes more time to execute this on my laptop.
